FORMS OF ATTACK

Malware means –
"malicious Software"
It covers a range of
different threats

VIRUSES

You may be asked to describe the difference between types of threats & their solutions

SPYWARE

Spyware detects data on a system and sends it back to the creator

WORMS

Worms are very similar to viruses as they self-replicate, but they can also infect other systems without human interaction.

MALWARE

What Should I do?

Investigate ways to Detect & remove Malware

TROJAN

Trojans hide inside other, seemingly harmless software

ADWARE

Adware is often just annoying, but is also a form of spyware used to create targeted adverts

Knowing about threats helps us to investigate methods of protecting devices & networks

Threat	Solution	Justification
Email with a virus accidentally opened		
Ads popping up on screen		
Keylogger found on system		
Free software slows down the computer system
